Surface Area of a Cuboid Example

www.cazoommaths.com

Find the total surface area of this cuboid

Notice: How many sides does it have?

Area of one blue rectangle face =
 $3 \text{ cm} \times 4 \text{ cm} = 12 \text{ cm}^2$

Area of two blue rectangle faces =
 $12 \text{ cm}^2 \times 2 = 24 \text{ cm}^2$

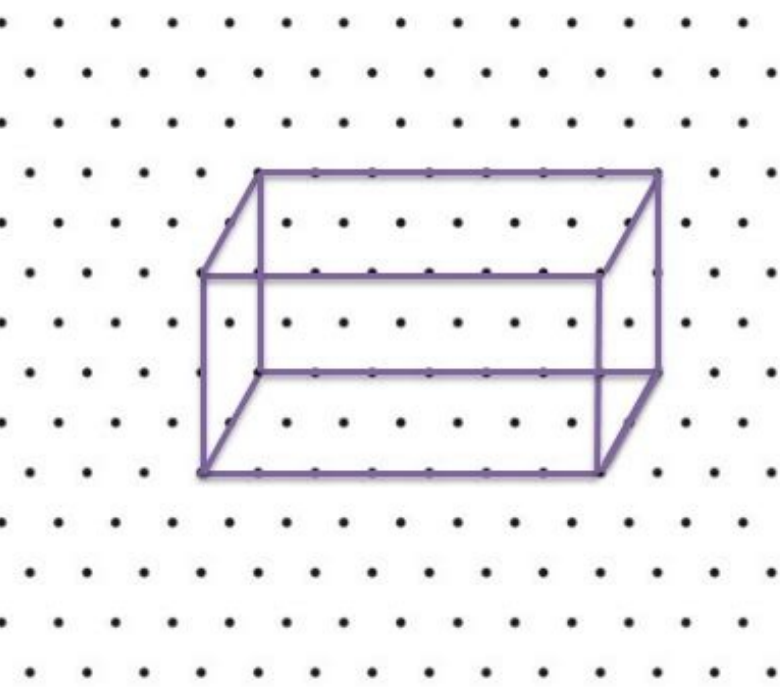

Area of one red rectangle face =
 $3 \text{ cm} \times 10 \text{ cm} = 30 \text{ cm}^2$

Area of two red faces =
 $30 \text{ cm}^2 \times 2 = 60 \text{ cm}^2$

Area of one green rectangle face =
 $4 \text{ cm} \times 10 \text{ cm} = 40 \text{ cm}^2$

Area of two green faces =
 $40 \text{ cm}^2 \times 2 = 80 \text{ cm}^2$

Total surface area =
 $24 \text{ cm}^2 + 60 \text{ cm}^2 + 80 \text{ cm}^2$
 $= 164 \text{ cm}^2$

Depending on how much guide is needed, repeat part 1 for other very simple ways. Imagine yourself if you were an engineer that you needed to design a much more complicated object than the "You tried to describe it as being difficult! That is precisely why we use encoded drawings in ingenierĀĀ. Perhaps you described the object using phrases like these: It's made of six cubes. Once finished, have students share their drawings with their partners. Before participating in this space visualization activity, ³ students must have taken the Spatial Visualization Practice Quiz and learned about space visualization ³ the associated lesson, LetĀĉĀ s Learn about Spatial Viz! (Make the slide show ³ appear and show to the class, starting with slide 3.) Spatial visualization ³ useful for working engineers, has proven to be an important predictor of the success of engineering students, and is also a learned skill. Have each partner use four cubes to make a shape and place the object under their chairs without showing the shape. We call this a ³ view of the cube. Thank you for your feedback! Experimentally check the properties of rotations, reflections, and translations. Part 1: In the planning phase ³ any engineering project, an engineer should be able to take the view ³ a new design from inside his head and illustrate it on a piece of paper or a computer screen. Also called isomĀ© paper. Triangle-dot paper is useful because the dots are located 120° ³ between themselves, making it easier to draw objects in 3D. Engineers use computer-assisted design programs such as AutoCADĀ© to create design drawings and drawings. Ask students to individually draw the shapes of their objects on isomorphic paper. Next to that are two cubes, also stacked on top of each other. That means we can improve our ³ visualization skills by practicing. A coded plan defines the shape of a structure or object composed of blocks. Coded Plan: a spatial visualization term that refers to a ³ to describe a three-dimensional two-dimensional shape. Before the activity collects the materials and makes copies of the blank triĀĀ gulo paper and the isomĀ© drawing worksheet.
